Operate your security system via smart phone just like you were in front of your actual alarm keypad.

Authentication
Set your user name and password that will send secure encrypted data.

Locations
Select multiple locations, such as your home or business, lake house, and/or family member's home, with a touch.

Event Log
Immediately access an event log and view alarms, open/close signals.

iPhone or Android

NOTIFICATIONS

Alarm Monitoring

Alarm signals are transmitted by the alarm system through your broadband Internet connection. Alarm signals received by the central station can be dispatched to the proper authorities.

Direct Notifications

You may elect to notified electronically to your cellphone or smart phone.

- alarm text messages to your cell
- alarm automated telephone call
- alarm eMail notifications
- open / close (arm/disarm) notifications by user
- notification when your child arrives home and turns off the alarm system

REPORTS

On-Line Internet Access

Alarm signals can be accessed with your secure logon. You may at any time view and print Intelligent Reports. You may also set up an automatic eMail report for the following:

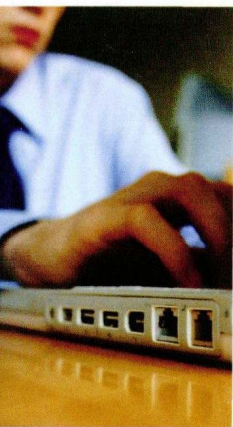

- open / close (arm/disarm) notifications by user name
- alarm signals
- supervisory / trouble signals
- test signals

Computer Access

Operate your security system on your computer, including multiple locations.

Customize / Program:

- text destinations
- eMail destinations
- automated computer voice notifications
- notification on types of signals
- display of alarm zoning information, such as "Zone 1 Front Door"
- display of user names
